

Webvanta

Database-Driven Sites Without Programming

Webvanta gives you the power to create sophisticated sites easily. No more dependence on programmers, fighting with back-end code, or limiting your designs.

Build Better Sites

Give every client a site that is easy for them to maintain and delivers great results.

Features Clients Demand

Go beyond static sites and simple CMS solutions, even for your most cost-sensitive customers. Webvanta empowers you to deliver all the features your clients want, easily and cost-effectively (see reverse for details).

Easy Custom Databases

Now that custom databases are easy and inexpensive, you'll use them everywhere. News items, events, project profiles, client lists, press releases, products – the uses are endless. Richer sites deliver better business results.

Foolproof Content Editing

Your clients can now maintain their sites easily, while preserving the integrity of your design. In-place editing eliminates the barriers to site owners using the CMS. Database-driven design totally separates content from markup, making editing foolproof.

Focus on Design

With Webvanta powering the back end, you can focus on design.

Simple to Integrate

Create your HTML, CSS, and JavaScript using whatever tools you like. Then it's simple to set up your code in the Webvanta system and gain instant access to CMS and database capabilities.

Set Up Any Design Quickly

No need to deal with an arcane templating system or HTML interleaved with PHP. Webvanta works around your design, not the other way around. You have complete control over how database content is presented.

Expert Support

When you have a question, we're here for you. Get help from an expert via chat, email, or phone. Or draw from our extensive tutorials and examples. And if you need us to set up your database or templates, or even to extend the back-end for you, we can do that.

Less Pain, More Money

Keep control of your designs without getting buried in technical hassles.

Sophisticated Sites

Many designers tell us they avoid jobs that require custom databases or back-end features. Now you can take them all on, knowing that Webvanta delivers powerful database features without back-end programming.

No Programmers Needed

Do you contract out to a programmer whenever a client needs a CMS or a database? Now you can easily do it yourself. Keep control, work independently, and provide more competitive bids. Empower yourself.

No More Hosting Headaches

You manage your site's content and design, and Webvanta manages the servers. No more worries about security patches, version upgrades, incompatible modules, or software without support. Your sites run on Webvanta's load-balanced, fault-tolerant server cluster.

Powerful Features Made Easy

Integrated Blog

Easily add a full-featured blog that looks consistent with the rest of your site and is completely searchable, customizable, and optimized for SEO and social media.

Optimized for SEO

On-page optimization including all metadata fields for static and dynamic pages. Built-in search-engine-friendly URL structure, blogs and cross linking allow quick ranking on Google.

Easy Custom Databases

Create any database you need just by filling out a form; Webvanta automatically generates the admin screens for you. Easily connect related items, images, and other files to database records.

Information Portal

Webvanta's optional information portal system makes it easy to organize hundreds – even thousands – of articles and links to resources, books, events, and more.

Membership System

Set up parts of your site as accessible to registered users only. Let users create profiles. For membership organizations, control who gets access to private pages.

Custom Forms

Easily create custom forms with whatever fields you need. Validation, email notifications and automatic database integration are built in.

Photo Gallery

Webvanta comes with a built-in photo gallery and slideshow. With automatic thumbnail generation and dynamic resizing, it's easy to add photos at any time – even for non-technical site owners.

E-Commerce

Easily integrate your site with third-party hosted shopping carts like PayPal or FoxyCart. The customizable database makes creating a rich product catalog quick and simple while providing unlimited flexibility.

Events Calendar

Your site can easily manage a database of events. Webvanta includes code snippets for a variety of visual implementations. Make past events disappear automatically.

RSS Feeds

Serve up feeds for your blog. Customize them to your heart's content, even add feeds for your custom databases.

Site Search

With Webvanta's built-in search system, your site comes equipped with super-accurate and highly customizable search features.

Painless Security

You never have to apply software patches or deal with vulnerabilities. And because Webvanta is built with Ruby on Rails, it's inherently more secure than PHP systems.

Plans to Suit You

Low, All-Inclusive Fees

Webvanta is extremely affordable. All-inclusive fees start at \$15/month or \$149/year.

Try Webvanta for Free

Use Webvanta for free for 30 days to be sure it meets your needs.

Much More Than Hosting

Our prices are competitive with quality hosting providers, and you get much more. Think of it as licensing a CMS and database system, and the hosting comes along for free. Not to mention daily offsite backups, software updates, site monitoring, and our world-class support.

Pro Designer Packages

We understand your business needs, and we've crafted special Pro Designer Packages to help meet them.

The packages include:

- White label: use your own branding (optional)
- Discounts on each site increase as you build more sites
- Priority support
- One-on-one training
- Extended free period while building sites
- Listing in our Certified Webvanta Designer directory
- Discounts on custom services, including PSD to Webvanta conversion and setup
